

Personal Computer Backup

Personal Computer Backup protects all data on the primary drive of your personal computer with unlimited storage, at a fixed low cost.

Enjoy our simplest solution for backing up user data. Operating system and program files are not included, giving you faster backup of all the files you created.

Our software checks for file changes continually. When you save a file we detect it and copy it to our servers. The difference between how you save it and how we save it is this: you keep only the new version saved, but we keep both the newly saved version and all previous ones for 60 days.

This is invaluable if a file is corrupted or attacked by a virus. You can rescue an earlier version of the file, usually with minimal loss of information.

Specifications Highlight

Price	\$69 per year
Storage (primary drive)	Unlimited
Operating Systems	Windows Only
Video Backup	No
HIPAA/GDPR Compliant	Yes
Free Support	Mon - Fri 9 to 5 EST

OPTIONAL

Install Service	\$50
